MTMPath's™ new software upgrade provides pharmacists with a one-step process to generate account-specific Medication Therapy Management (MTM) recommendations through pre-built and customizable templates.

The new StatPath™ functionality was developed by Clinical Support Services (CSS), a national leader in providing MTM software and solutions to managed care organizations, ambulatory care pharmacies and consultant pharmacists.

The latest innovation of MTMPath's recommendation module, StatPath provides an easy, efficient way for users to generate consistent and professional recommendations in seconds.

While each MTMPath account includes numerous pre-loaded StatPath recommendation templates, pharmacist also can build their own unique templates for use within their MTMPath software account. All newly created template recommendations can be stored in the user's profile for application over and over again by the simple click of a button.

## **PAGE TWO – StatPath Release**

“We believe this latest addition to the software’s recommendation module is ideal for long-term care pharmacy consultants and managed care MTM pharmacists who have to produce high volumes of standardized drug recommendations,” stated James Notaro, R.Ph., Ph.D., president and founder of CSS. “A strong, well-designed program such as MTMPath can tremendously impact the wellness of a patient population, increase the effectiveness of clinical operations, and reduce prescription and other medical costs.”

For more information and a demonstration of MTMPath and the new StatPath recommendation template, contact CSS at 716/541-0273 or [rachelwozniak@csshealth.com](mailto:rachelwozniak@csshealth.com).
